

AUTHORPOINT

Patel Rajvi¹Patel Purvangi²Prof Ajaykumar T. Shah³

Department of Computer Engineering
Alpha College of Engineering and Technology

Abstract- An author brings more to the table than just a good book, patent or article! These folks are often leaders in their field, industry, or topic of interest. You can use Authorpoint to connect with Authors directly. Readers can ask any questions in public i.e. visible to everyone or private i.e. visible only to the author. Readers can book authors as a speaker to give audience education and insight to the topics of their book or about their field and Follow them at book signing or other events. Readers can hire authors for phone consultations, Projects, or Exploratory Discussions. Authorpoint makes it easy for you to stay connected with your readers, help them, answer questions, sell e-books/articles and even start a dialog with prospects about small projects to much larger engagements worth tens or even hundreds of thousands of dollars. Just signup and claim your profile. If you do not have a profile already, add one and we will enable it for you. It's FREE. And, not only that you earn points for answering questions.

Keywords- Readers, Authors, Books

I. INTRODUCTION

In this website there are three users Admin, User and author. If user can not register he/she can see all the book information and author information. If user had register, he/she can add book by describing book name, images, prize, pages and etc. If user claims author's profile and if the identity get matched then Admin will approve the request the user have made and he/she will get the profile. Author can add another book and some information related to it. Author manage event organization. Admin can handle the events, jobs and then send to the user. In "AuthorPoint" a user can communicate with authors and can buy books and go through the information he/she wants to know about authors and his books, can also solve his/her query by asking questions to author publicly or privately. Users can even see the events location near them. Author can upload books and communicate with users publicly or privately by replying to their question. Admin will manage the events and job and also verify authors profile and manage claims done by users.

II. SPECIFICATION

The main users in the project can be categorized into three parts.

The first part is of Admin. Admin can handle the full system and key user of the System. Admin can manage our profile. Admin can manage the user, Author and also add, delete user. Admin can manage the plan who has a subscriber the author. Author can organize event, and also manage the event. Admin can add the new book and Author.

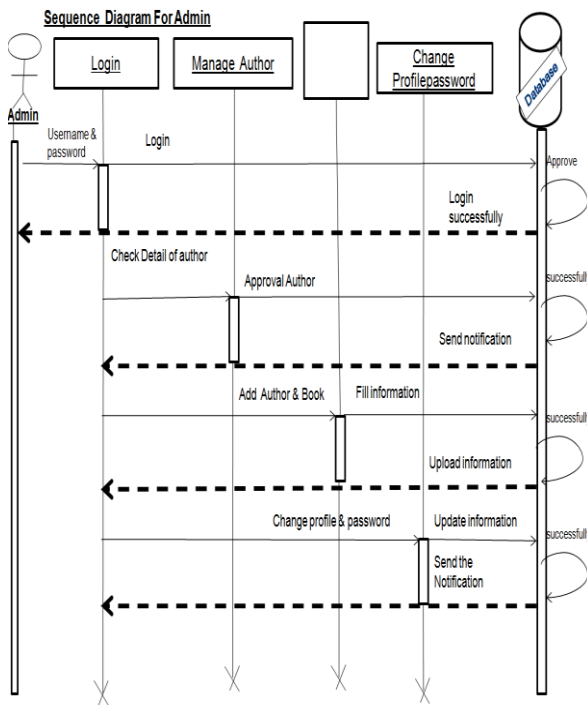

The second part is of User. User is a main User of a System. User Must Register in System. User can login with email id and password. User can check the book information like book name, price, author name, publisher name. User check the service with which event organization near by area. If User can not register he/she Search the Book. User can check book by Author wise. User can ask the question. User can update their information. User can book claim then upload the book.

The third part is of Author. Author can login with Email id and password. Author can upload another book. Author check the inquiry, which type of question asked to user. User have asked question to reply properly answer to send. Manage the Event organized near by area and informed to admin. Author reply answer with public or private to send.

III. METHODOLOGY

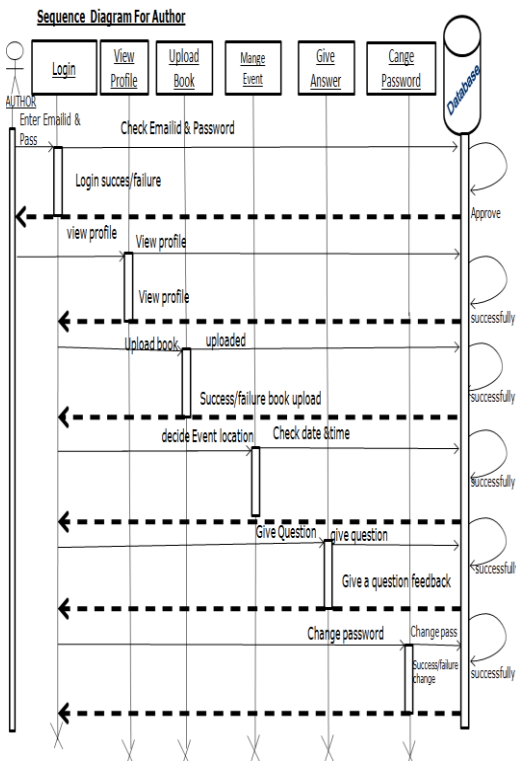

AUTHORPOINT acts as an online medium between Authors and Readers. This application will be used by the users to get information about Authors and his/her books. The application contains the sign up form which user have to fill in order to get contact with authors and further information regarding him/her.

- SEQUENCE DIAGRAM
- ADMIN:
 - o Login
 - o Check details of authors
 - o Approval of authors
 - o Add books and authors
 - o Upload information
 - o Change password

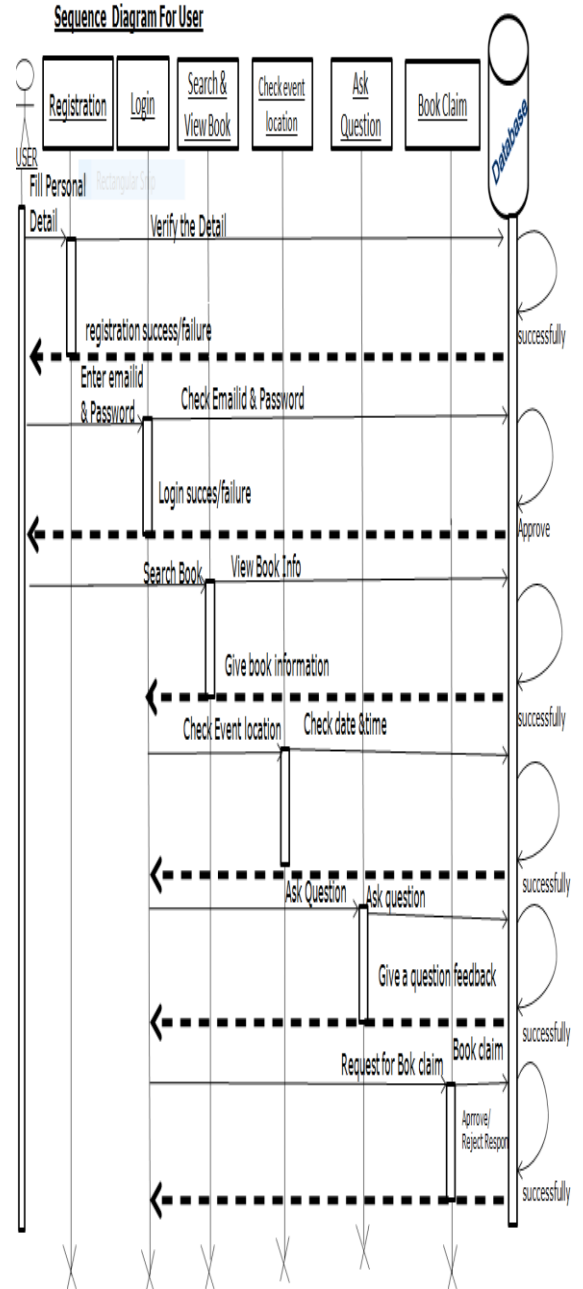

❖ AUTHOR:

- Login
- Manage event
- See profile
- Upload book
- Give answer

❖ USER:

- Registration
- Login
- Searching
- Ask questions
- Book claim

IV. OBJECTIVES

Authorpoint makes it easy for you to stay connected with your readers, help them, answer questions, sell e-books/articles and even start a dialog with prospects about small projects to much larger engagements worth tens or even hundreds of thousands of dollars.

- Authors and Readers can communicate

- Promote books for free!
- Books can be purchased
- Check-ins,maps, follow authors,etc.

V. SPECIAL FEATURES

The idea to this application was inspired by one of the existing application named Author Junction which allow user to get information about authors. In that application one can also chat with authors. Thus, inspired by that, we are providing facility to buy books and even e-books converting that idea in a way that would be helpful to readers. Thus, it makes our idea of the project unique as there is no such existing web application.

Approval/disapproval:

This is one of the main feature of the application as admin can approve or disapprove the content that has been submitted by authors sent to them by different authors and approve them. This will build the communication gap between authors and the admin and will help readers to get information efficiently.

Events:

Authors can sign up to the places where events take place through which interested readers can join them by checking there sign ups.Events like launch of books,discussions,etc take place.

Jobs:

Group of readers hire or book speakers for discussions.Readers should ask admin for this and admin will talk to authors that if they are interested in such functions or not and if they are then further information and process take place.

Books:

Information about books and their author is correctly provided,readers can also buy books from this application.e-books are also provided.books are categorize in different genres.

Filters:

There is also a feature of filters which will be chosen by readers about the authors and books field of content they want tweets or photos to be sent to them for approval or to be uploaded on their accounts.

Ask questions:

Readers and authors can communicate with each other publicly or privately.Other readers can comment in public conversations.

VI. CONCLUSION

During the planning and analysis phase of my project entitled “*Authorpoint*”, We tried our best to implement as many as features to make it viable and usable.System is analyzed and planned to be an efficient and easy-to-use tool for admin and users.Software is planned to be developed with an efficient platform to fulfill needs of an organization.According to feasibility analysis it is feasible in all way to the organization and its related users.
