**Abstract-** My application provides the basic platform of wedding scenario. Here we give the platform for those who want that the wedding planners should planning the wedding. We provide various features as buying party plot, hiring the photographers, choreographers, caterers, beauticians, Wedding themes, Mehndi artist, wedding planners, videographers, Dj, Band Baja, decoration, flower marts, sweet shops and many more. Also user has the feature of getting location of each and every part that can be associate during wedding as some of them we mention above. As well as the user has a choice that if user wants to hire a wedding planner or user manages all the events by their own. If user hires wedding planner then the list of available wedding planners at that duration will be displayed, then the planners work will be displayed in terms of photos, reviews and rating. And if user denies hire of wedding planner then user getting all the locations of the related components of wedding. As well as user getting the location at that time only for example how much distance far the shop is just like tracking the user as well as the location of that shop.

**Keywords-** Project planning, Records management, Information management, Marriage.

## I. INTRODUCTION

The wedding industry is a multi million pound sector with thousands of pounds being spent on each wedding. With the wedding couple spending so much money on making the 'big day' perfect and memorable, they are becoming more willing to pass the responsibility of planning wedding into the hands of a professional. Wedding planner are given the task of generating ideas and guiding the planning of wedding so that couples can have a less stressful build up their big day. Here we are you to guide at the time of need at the time of wedding.

A wedding day can be split into small events, some of this events are depending upon the religion of the couple get married. The wedding planner will typically visit a client, gathering their requirements and built a timetable for their wedding day. There are groups of people involved in each task and events, for example caterer need to be available when preparing the main meal.

## II. LITERATURE REVIEW

The aim of this project is to explore how a wedding day and its preparation can be segmented into events and task and to design a technique which sequences these events so that given constraints are satisfied. The objectives are to research project management and scheduling tool that are already available for solving the problem. Develop an application that implements the core modules of the wedding planner.

The minimum requirement is to develop suitable model of the events involved with wedding planner, sequence techniques based on the model, application which implements the core components of techniques. The possible extensions are graphically display the sequence of events. Make the sequence dynamic so that user can change the order of the sequence if they want. Add the contact database that stores details of all the wedding planners

There are many functions that take place during the build up to an wedding with religious celebrating different ceremonies. As the main day is wedding day no matters what the religion is belong. There are also the preparations of task that need to take place before certain events can begin. These events play the major role in wedding. At the time of marriage customs and religions are very important and we are trying to make that day memorable for couples that are bond into very pure relationship.

## III.METHODOLOGY

Wedding Planner – an android application will work on all android devices. The main purpose of this application is to make the ease for the relatives whose manage whole wedding by their own. During our research we found that there are few applications in our area that guides the location of the components that are associated with the wedding duration.

So we are interested in developing this application which would surely make a difference in my area.

1. Users have to Signup in application.
2. The list will be displayed of the components which are related to wedding.

3. Then the users have a choice to hire a wedding or do by their own.
4. If the wedding planner was selected then of wedding that are available in the nearby area will be shown.
5. As well as their working profile will be shown in terms of photos, reviews, rating.
6. And the estimated cost, i.e. it approximation of charges during whole wedding required by planner will be displayed.
7. If the user wants to do by their own then the list of respective component displayed.
8. Along with the components their locations will also be displayed.

Wedding planner is an application that provides the platform for those who are not known to each and every place, or detailing about all the components. It is the platform where users are help at the time rush they will guide by this application.

#### IV. FEATURES

The idea of this application is inspired by the application named wedding estyle which gives a new look to the android application. In that application user has the multiple choice given that user uses the application very easily. In this application the user can also get the information at user choice, no mandatory rules are there to hire a wedding planner is must.

The important features of our application are:

- This application is user friendly.
- This application provides the platform for wedding purpose.
- This application gives multiple choices to the user for convenience.
- This android application is very helpful for those are not known about areas.
- The advantage is this till now in our area this kind of application is not available.
- In this application, we provide the wedding themes which are new to the user.
- User can also be create the theme as user wants different from the available themes.
- Then we give the facility of the gifts in choice list that is also new to the user.
- In this application, user has the no mandatory rules.
- In this application, user not only inform that the location of the components but also has the facility to trace that location at that instance only.
- Wedding application has only the inspiration to make the day memorable and grand for the couples who are engaged.
- From this application, we spread happiness and convenience to the relatives of couples.

#### V. CONCLUSION

Wedding Planner is totally oriented towards the idea of helping the users as much as possible and spread happiness. We are here to make that day memorable, grand as well as perfect for the couples that are bond in pure relationship. And the best strength of this application is that in nearby area that gives the information about the components which are related to the wedding events. If this application will be live I m sure that it helps the people in major amount. This application will be also be one of the applications which is implemented for the help of the society.
