**Abstract-** Our website in progress titled as “MILE STONE”.As the service name suggests the site is purely based on the milestone service of the freelancers.It is freelancer website management website.In this website we are designing the website for the free lancers and the companys who are providing the free lancer work. The application will show the overall display of the all of the projects were given by the compny to the developers.In this website the developer will upload the work done by him on the daily basies this way all yhe othe projects also be uploaded on the server of the website.now the all work uplaoded by the different different developer will be shown on screen.the work done by the developer will be shown in the form of percentage.This way the all the project work will be analysed by the manager easily.This website is intended to make the free lancing and the managers work easier.The manager will make the all necessaary analysis.

**Keywords-** free lancing ,project management,project analysis

## I. INTRODUCTION

A freelancer, freelance worker, or freelance is somebody who is self-employed and is not committed to a particular employer long term. Sometimes life can get tough, and you probably are thinking, let me quit my job and work for myself. In short freelancing definition is working for yourself. This is a plain and simple explanation. Nowadays, there are many people in the field of freelancing.

## II. LITERATURE REVIEW

PHP is a popular general-purpose scripting language that is especially suited to web development<sup>[5]</sup>. It was originally created by Rasmus Lerdorf in 1994;<sup>[6]</sup> the PHP reference implementation is now produced by The PHP Group.<sup>[7]</sup> PHP originally stood for *Personal Home Page*,<sup>[6]</sup> but it now stands for the recursive initialism *PHP: Hypertext Preprocessor*.<sup>[8]</sup> PHP code may be executed with a command line interface (CLI), embedded into HTML code, or used in combination with various web template systems, web content management systems, and web frameworks. PHP code is usually processed by a PHP interpreter implemented as a module in a web server or as a Common Gateway

Interface (CGI) executable. The web server outputs the results of the interpreted and executed PHP code, which may be any type of data, such as generated HTML code or binary image data. PHP can be used for many programming tasks outside of the web context, such as standalone graphical applications<sup>[9]</sup> and robotic drone control.<sup>[10]</sup>

## III. STUDY FINDINGS

- A. The basic websites which are available this time of date are providing only the work submission facilities not payment options and chatting or the notification facility.
- B. The minimum hardware requirement is Memory of 4 GB RAM or more, Monitor resolution of 1024\*768 or highest access, Intel Pentium 4 or AMD Athlon 2 GHz (or more faster), 1 GB (or more) available hard disk space and high speed internet connection.
- C. Every user should be comfortable for the working of the known as a basic computer and net browser. They must have basic knowledge of English Language. User have to login one time. User can select the desired person by selecting categories. User must have some knowledge of how to use any websites. They have been some create account of basic needs.
- D. Admin is an entity that will manage entire system. Admin have must authorized. Admin have all rights to performing any type of given rights to the given user because they will have highest level of access the rights. Admin have under observation of some areas like database, security, integrati

## IV. FUTURE ENHANCEMENT

- The limitation of our project is we are not able to provide the text message and video calling.
- In future the website can be modified by adding the feature of chat module.
- We can also add feedback feature to know the experience of the users
- We can add the online payment method for the freelancer.
- The manger will not able to pay the money to the developer.

## V. CONCLUSION

By creating this website we will make the communication easy for the free lancers , it will also reduce the efforts of the manager, and the manger will able handle the project easily for the all of the project. compilation in the form of the percentage .it will be smoother experience for the both free lancer and the project manger.

## VI. ACKNOWLEDGEMENT

We express our sincere thanks to Prof. Ajaykumar T. Shah, of Computer Engineering department, ALPHA COLLEGE OF ENGINEERING AND TECHNOLOGY for his support and guidance for this project and care taken by him in helping us to complete the project work successfully. This is to place on record our appreciation and deep gratitude to the persons without whose support this project would never been seen the light of the day.
