Abstract- All around the world there are more than 100 millions orphanages worldwide .In asia there are 65 millions of orphanage homes are there.This orphanages and old age homes are having a hard time because of lack of sponsers and also because of financial issues.The main cause of this financial crisis is that the people do not know that there are many Orphanages who need a helping hand to maintain there orphanages .So we are trying to build a website which contains the information of each and every orphanage in a particular place.In today world information is the powerful weapon which helps the people to know about anything.So we are giving that particular information to the people.

Keywords- Orphanage, Old age homes, python, Django.

I. INTRODUCTION

Abandoned but not alone, every year at most 100 millions of kids are made orphans and more than 100 millions of parents are not having kids of their own. But that's not a sin performed by them. Even though they are a lot of orphanages and old age homes there is no information o this orphanage homes which makes it impossible to help the orphanages. We a team of 4 decided to break the tantrums and help them both by our very own developed website. This websitewill helps the people to know about each and every orphanage and old age homes in a particular place which will helps the donors to know the location of the orphanages and makes it easy to help them.. By this, the end-users are given multiple options to help the orphans, for which the users are asked to login using their phone number for unique authentication, so as to avoid chaos.

II. EXISTING SYSTEM

In the previous process they are proposed to create a android application using Android studio. Initial step of the application will be login. It has two ways of login one isuser/donor login and other is admin's login which means the admin of the particular orphanage. In case of donor login they will be having three options; they are donation, adoption and orphanage details. By selecting the particular category they

can reach their required page. In the donation category they can donate food, clothes and money the particular orphanage they wish. In adoption category they will get list of orphans and their details of different orphanages. In case for admin login whole pattern will be different. Whenever new orphan is admitted they can enroll the details of that child in this portal. And if there is any shortage of food, cloth or money they can give a notification to the registered user's phone numbers. Each person who login into the application has to undergo authentication with their phone number and they will become a member of this application and they will be given a unique ID which reduces chaos. So whenever admin puts a notification of need will be reflected as a notification to the donor's side. And in our application we have planned to display list of orphanage region wise. And their bank details will also be associated with that. This will be used for the donors for the online fund transaction. So that donor can directly pay to that particular orphanage with full satisfaction. Since the process of adoption undergoes many legal processes, we are not including that in our application. We will only provide child details and where they belong to.

III. PROPOSED SYSTEM

In the existing system there are creating an android application but it don't have the information about each and every orphanage and old age home in a perticular place.To overcome this problem, we are creating a website which will provide the locations of each and every orphanage in a certain area. We also provide some additional features in our website. The website also provides the information about orphanages like the environment of the orphanage, overview of the orphanage, paid or not.

The contents we have in the website are:

Login
Orphanages location
Information about orphanages status (paid or not)

Working modules

This application has many modules .They are,

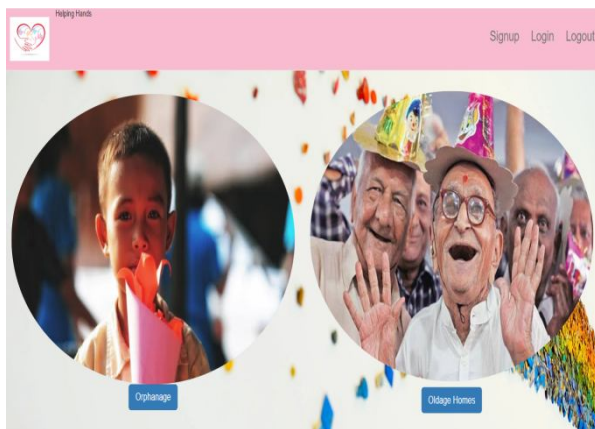

1. Home page
2. Login-login, logout, signin
3. Different regions-Andhra Pradesh, Telengana
4. Orphanages in different locations
5. Paid or not

Here the people who login to the website will be given a membership status which allows the user to access all the information present in the website

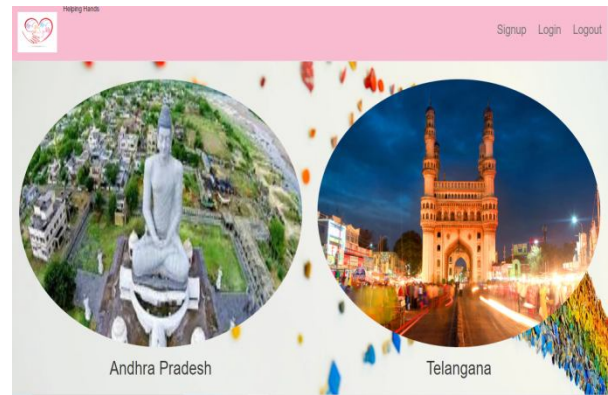

1. Home page

2. Orphanage or Old age homes

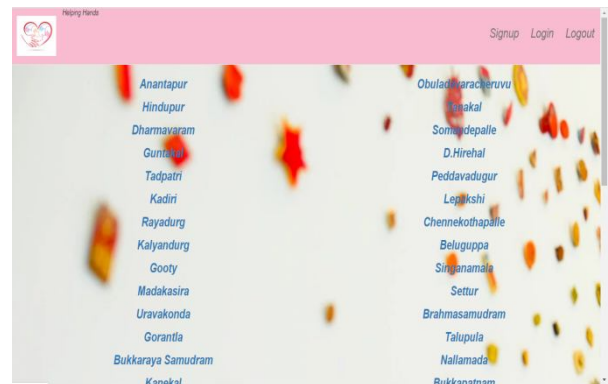

3. Different locations

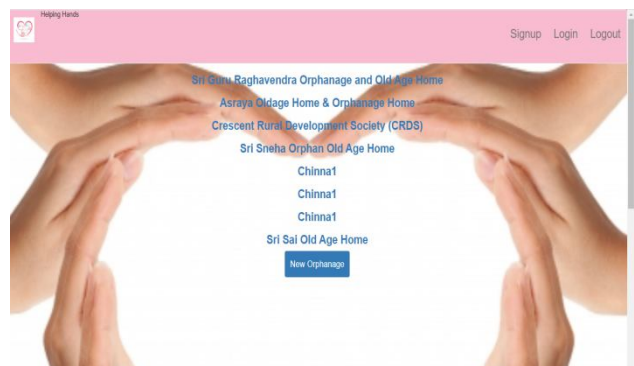

4. Different districts in states

5.Mandals in anantapur state

6. Orphanages list in a mandal

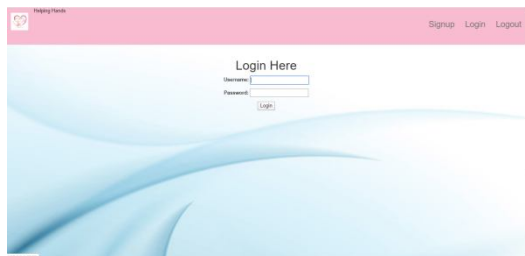

7. Information about orphanages

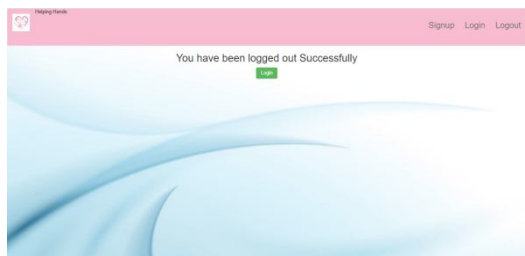

8. Signup page

9. Login

10. Logout

IV. CONCLUSION AND FUTURE WORK

The imposed paper will solely help in Getting the information of orphanages and old age homes in a particular place. this website will helps the old age homes and orphanages to get help from the sponsors and donors. It also give information about the environment and the number of

children in the orphanages .In this way this website can acts a sa interface between orphanages, old age homes and the donors, Sponsors.

The main motive of this system is to act as a interface between the orphanages, old age homes and the donors, sponsors.
