Abstract- *The "Online News Portal" is managing the details of News, News category, Latest News, Sport News, Weather News. It manages all the information about News, Comment, and Weather News. The Project is totally built at administrative end thus only the administrator guaranteed the access. The purpose of the project is to build an application program to reduce the manual work for managing the News, News category, Comment, Latest News. It tracks all the details about the Latest News, Sport News and also buy magazine.*

Keywords- online news,buy magazie,

I. INTRODUCTION

Proposed system is a web application which is built in ASP.NET MVC. Also available in android Application. It provides the Candidate's ability to register to application and manage their accounts. Each candidate will have an account with their own home page. Admin can add news and delete and update news and post details. Admin can modifiy the news. Also admin can be aware of the updating news and different various post.

.Net Framework is a software development platform developed by Microsoft for building and running Windows applications. The .Net framework consists of developer tools, programming languages, and libraries to build desktop and web applications. It is also used to build websites, web services, and games.

The .Net framework was meant to create applications, which would run on the Windows Platform. The first version of the .Net framework was released in the year 2002. The version was called .Net framework 1.0. The Microsoft .Net framework has come a long way since then, and the current version is .Net Framework 4.7.2.

The Microsoft .Net framework can be used to create both -**Form-based** and **Web-based** applications. can also be developed using the .Net framework.

The framework also supports various programming languages such as Visual Basic and C#. So developers can choose and select the language to develop the required application. In this chapter, you will learn some basics of the .Net framework.

.Net Framework Architecture is a programming model for the .Net platform that provides an execution environment and integration with various programming languages for simple development and deployment of various Windows and desktop applications. It consists of class libraries and reusable components.

II. LITERATURE REVIEW

A) The newspaper industry is struggling with difficult economic realities and is seeking new revenue sources. Many newspapers have added online video content in an attempt to compensate for the lost revenues from the decline in traditional print media sales,but the adaptation of these new formats has not been smooth, and many are still struggling to

capture the full value. Producing traditional television is too expensive, and th requirements can be too high for the newspaper's staff. The result has often been that the readers have not been interested in the final product, and without readers, the advertisers are not satisfied and so withdraw their revenue, creating downward financial spiral.

B)   .An in-depth search demonstrates that there is a mere handful of research reports that specifically focus online videos at newspapers' websites. Instead, a lot of research has been done about online videos, e.g., on YouTube and online publishing, that includes observations that can more or less extend to online news videos.

III. TECHNOLOGY

The main objective of news is that to provide the all type of instant and important news related business, world , world sport, national education etc. Publish news about region, town, city, national and international, end reporter can upload news from any where at any time through web,mobile,tablets with registered login id & password.

This system is an bulletin world based system and if may help collecting perfect management in details.in a very short time, the collection will be obvious, simple and sensible.it will help a person to know the management of passes year perfectly and vividly.it also help in current all works relative to online news portal. Admin can view all the details and requests. Admin has the authority to add/delete both users & reporter, to generate and update the commodity details.   It   track   all   the   information   of   news category,comment,sport news etc. Manage the inforation of news Shows the information and description of the news,latest news
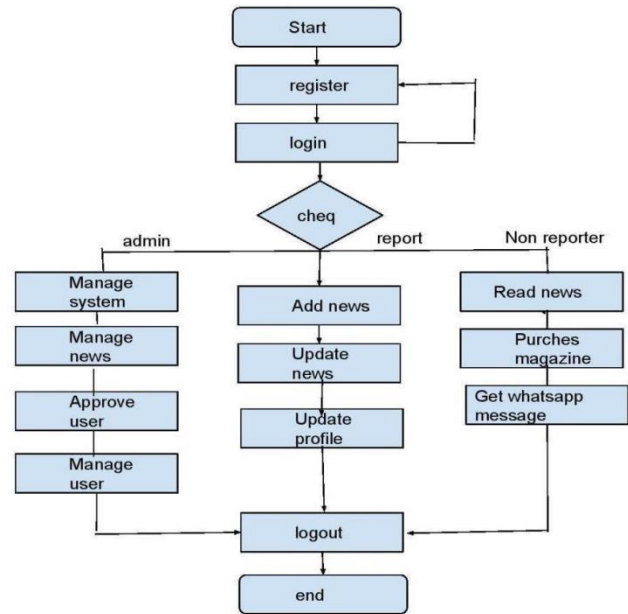

IV. STUDIES AND FINDINGS

You might want to look at the news sites that are already available online. These sites post new information on an hourly basis, while also storing past news stories and articles. It can help to have a list of the news sites that provide the most reliable and accurate information for your needs. Some popular sites include:

- CNN
- MSNBC
- Guardian
- BBC News
- Reuters

V. SYSTEM DESIGN

1)   Flow Chart

The flowchart is a means of visually presenting the flow of data through an information processing systems, the operations performed within the system and the sequence in which they are performed.

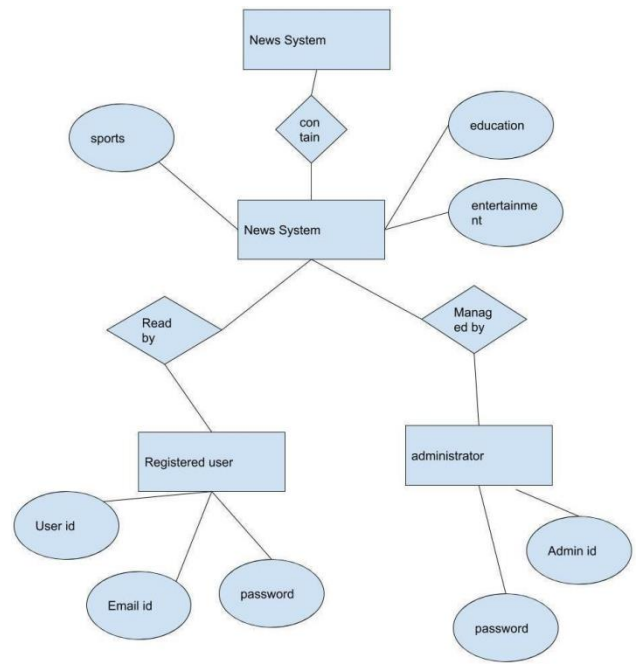

Flow Chart

2)   Activity Diagram

An activity diagram is a visual representation of the "flow" of data through an information system, modelling its operation aspects. Activity diagrams are schematic representations of step-by-step workflows and behavior supported by choice, iteration and concurrency. In the Unified Modeling Language, activity diagrams can be used to describe the business and operational step-by-step workflows of components in a system. An activity diagram shows the overall flow of control.

Activity Diagram

Entity-Relationship Diagram

3) E-R Diagram

In the field of software engineering, an entity-relationship model (ER model) is a data model for representing the data or knowledge elements of a business area or its process specifications in an abstract manner that ends up being applied in a database such as a relational database. The key components of the ER models are individuals and interactions that could occur between them and databases. An entity-relationship model is a formal way to describe and define a business process.

VII. CONCLUSTION

In our project work an attempt has been made to develop News or information based website. We develop this project that helps the people and make them aware so that they can know any news. To establish this website we use various methodologies. To develop this project we have faced many problem but we hardly tried to develop this project

VIII. ACKNOWLEDGMENT

We express our sincere thanks to Prof. Ajaykumar T. Shah Head of Department of Computer Engineering, Alpha College of Engineering and Technology for their Support and guidance for this project and care taken by them in helping us to complete the project work successfully.
