Abstract- Booking photography is a project which will enable customers or client to book for professional photographer via online.It is difficult for those who want to book for photography session to request for their favourite photographer since the process was done manually.By having this system,it will be easier for them to make theirbookings.

*Keywords- Facilated Client with online facilities of working business and client and employee management.The project made so much clarification for the customers and also divided into the several parts that help to easy communication.

I. INTRODUCTION

This web site going to be online presence of photography business of the client.Nowdays Social media is the trending platform for the so many reasons we teach through online coaching,we cook through You tube videos,we book our cinema ticket through the booking app,everywere is the social networkingToday we live in the society that is vocal and confident people needs so much things to ask to the service provider.It is not possible to go everywhere and take bookings from people to people,it's the consumable and also in the pandemic of covid-19 it is so much risky,so thinking on the todays situation and also taking in the point for the customers statisfaction.

Booking photography is a project which will enable customers or client to book for professional photographer via online.It is difficult for those who want to book for photography session to request for their favourite photographer since the process was done manually.By having this system,it will be easier for them to make their bookings.

II. MOTIVATION

Basic motivation behind this project is to consumes time of the customers and also the work.We are came up with new idea for the app photography booking.

We provide a package of hole ceremonies of wedding,engagement ceremony,prewedding and postwedding shoots,baby shoot and all ceremonies etc.We provide a makeup artist also and the always customers opinion is preffered first.We have a section of packages varying from the base to the destination wedding packages,it will cover all the your doughts and all the information regarding this.

III. PROBLEM STATEMENT

Ask photographers what they believe the purpose of their website is and you'll hear answers like this:

1) To show my photography to potential clients...
2) To get people to hire me or book my services..
3) To let people see how much I charge and what I can do for them...
4) The truth is, the website is none of those.
5) The way I look at it, the photographer's website really has only ONE purpose in life – to generate leads the photographer can then follow-up with.

That means paying attention to factors like these:

1) Understanding who the ideal target client is...
2) Attracting the right people to the website with targeted content...
3) Communicating the reasons why people should consider hiring the photographer...
4) Establishing a real human relationship with website visitors based on shared values...
5) Converting interested, motivated and qualified visitors into leads (i.e. email subscribers or phone calls)...
6) Telling the stories behind the photography to create context and emotional attachment...
7) Eliminating everything from the website that does not directly support the end goal...

IV. LITERATURE REVIEW

Based on ,our client is a professional photographer and has working in this field Being a photographer for the past years, he was facing problems in managing bookings, earning records, work portfolios, and packages for different events. With such problems, he was not able to respond to all the

requests from customers.Then, he realized that all the photographers across the world might be facing the same problems when it comes to managing bookings, earnings, work portfolio, and other things related to the photography business.

Realizing this problem, our client decided to develop one such online platform where photographers can manage everything from bookings to earnings, new requests to on-going bookings, portfolio, and packages. To develop one such online platform, our client started looking for a website development company that has experience in developing such a platform. Using this on-demand photographer website, professional photographers and customers can get in touch and communicate pricing, dates, and other things to hire a photographer. Whether users own an android or carrying an iPhone, this hire a photographer website works smoothly on both the platforms. No matter what type of photography services a photographer provides; the photographer can manage the entire business at this personal photographer platform. The photographer can bookings, earnings, work portfolio and other things related to business.

In these system all the data is maintained in the database which is safe and easy to retrieve.Users can book the photographer antime and User can know the location of the phoot shoot.
