Abstract- Can you transfer your feelings from one point to another? Is it possible? yes, it is Possible. We can transfer the feelings in the form of a wavelet from one point to another by using the Electromagnetic waves. These wavelets are developed from the human bodies and travelled for different distances. These have a more power to attract or ripple any living thing. By this terminology people are more effected by this in the form of good and bad way both. Now we will know how people are affected by this and what type of energy sources are used to transmit these energies.

Up to now we have seen different types of emotions and ever we know that which emotions have highest power? How these emotions effect the human behavior? How these Emotions are travelling? How to control these emotions? all these factors we will know.

Keywords- Behavior, Effects, Energy, Feelings, Humans, Living Things, Power.

I. INTRODUCTION

This Modern world we changed everything i.e. our Way of Life Styles, Way of Living Styles and Way of Talking but from Ancient days to now the effect of feelings on person are not changed and the effect on the person also not changed. Can you transfer your feelings from one point to another? Is it possible? yes, it is Possible. We can transfer the feelings in the form of a wavelet from one point to another by using the Electromagnetic waves. These wavelets are developed from the human bodies and travelled for different distances. These have a more power to attract or ripple any living thing. By this terminology people are more effected by this in the form of good and bad way both. Now we will know how people are affected by this and what type of energy sources are used to transmit these energies.

Up to now we have seen different types of emotions and ever we know that which emotions have highest power? How these emotions effect the human behavior? How these

Emotions are travelling? How to control these emotions? all these factors we will know.

Sometimes people are thinking about some person and that person is not there but he/she will know that somebody is thinking about me. How is it possible? It is possible due to transfer of wavelets but the people up to now are want to know how these are affecting.

These wavelets are group of particles and can be travelled for more ranges and these are generated from the human body. Wondered! Yes, it is from human body.

II. WAVELET GENERATION

The wavelet is an analog wave if we see it clearly it will occupy the space of analog wave and the part is filled with vibrating particles. These particles have some amount of intensities (i.e., energy) and these energies will be transferred in the form of Electromagnetic waves in the free space.

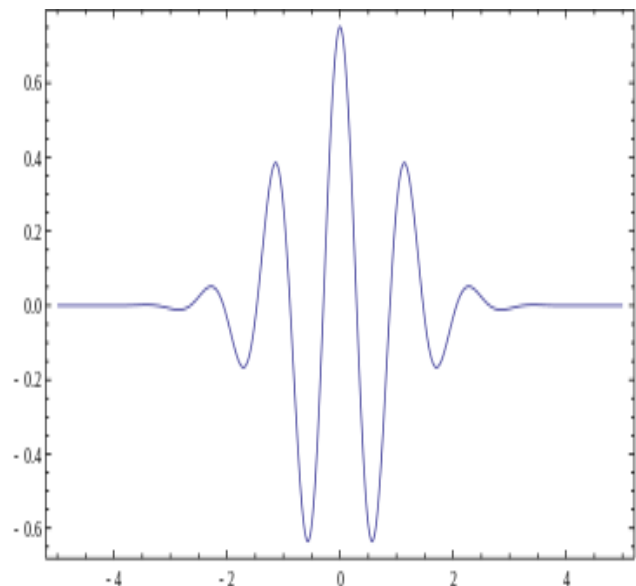

Fig 1: Wavelet Signal

These wavelets are can be emitted from the human body in the form of heat i.e. the high frequency of energy.

These energies are created inside the body due to **the action of air**. Human body consists of different chemicals and these can generate the heat with the help of air. For example, if we consider a flute it has different holes but when we blow the air, the outcome of air from the end point with the different frequencies. Likewise, the heat i.e. high frequencies are coming from the head of the body and these waves are travelled in the form of ellipse shape.

We are describing about the waves are travelling around the human in the form of ellipsoidal shape because if we consider anything present in the world like rice grain, wheat grain and fruits all these are present in the ellipsoidal shape if we send the air or anything they can travel in the ellipsoidal shape around them. Likewise, human being also presents in ellipsoidal shape and the waves also travel in the form of ellipsoidal way.

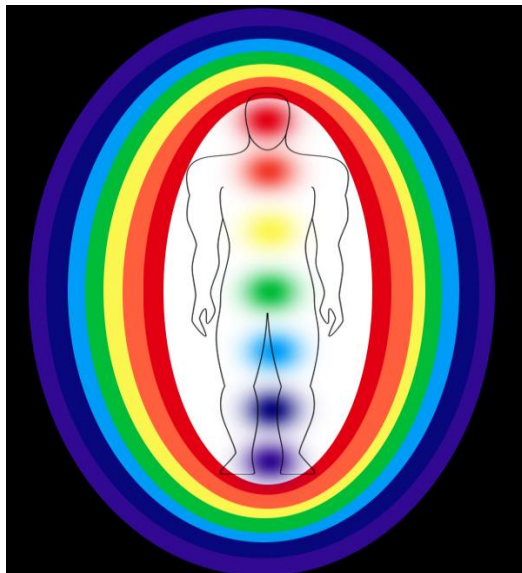

Fig 2: Radiation Wave around Human

Whenever the waves which are generated from the human body have some amount of frequency. For example, if we think about a person in certain range of frequency the wavelets are transferring from our body to that matched frequency of body in the form of wavelet using Electromagnetic wave phenomena.

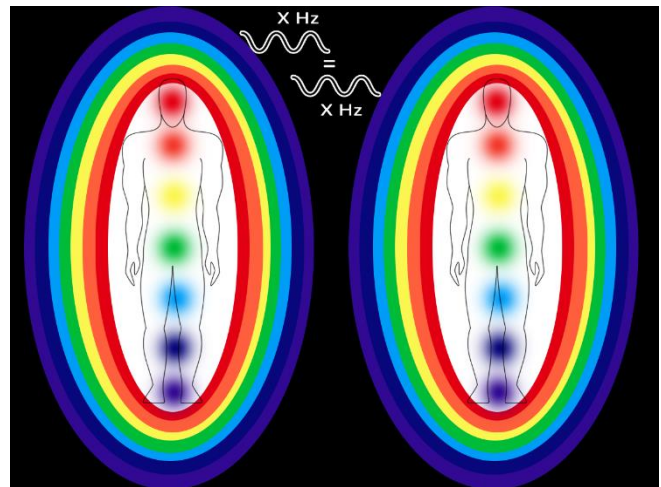

Fig 3: Persons With Equal Frequency

III. WAVES WITH COLOURS

Each wavelet coming out of human being consists of different colors and we can see them in the form of photon energy i.e., light energy. We recently know the thing that the high frequency of energy is coming out of the body in the form of heat, that heat have photon energy i.e., light energy.

In this section I am linking that energy coming from the body in the form of KVIBGYOR. These letters indicates different colors those are K-Black, V-Violet, I-Indigo, B-Blue, G-Green, Y-Yellow, O-Orange, R-Red. In this the Red Have high frequency and Violet have low frequency. We can link these colors with our emotions and the strongest emotion in the universe is **Angry** it has very high frequency and I can link with Red Color. It has a chance to change any living thing emotion from one to another. And the weakest emotion is **Sad** I can link this with the Black color and this have the lowest Frequency. The remaining colors have different types of emotions. The black radiation remains stable in the universe. All the emotions are present in the human body and can describe with color pattern as shown in the figure.

If the high frequency i.e. Radiation (emotion) will have a more chance to change the action of another frequency i.e., Radiation (Emotion).

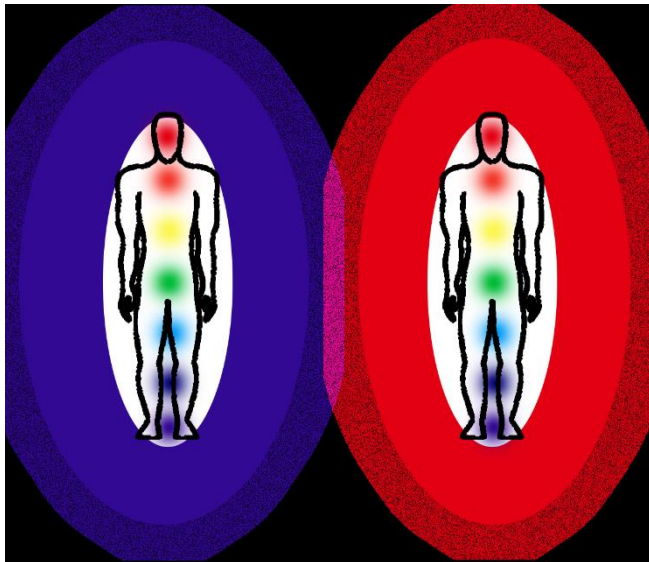

Fig 4: Radiation Impact on Persons

In this we are shown that one frequency of signal have high frequency and that signal have a tendency to change the other persons frequency also from one state to another as shown in the below figure.

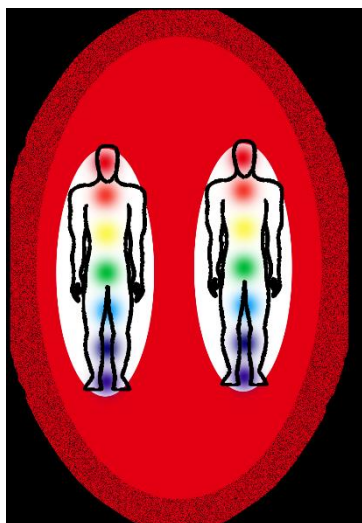

Fig 4: Emotion Changes the Persons Emotion

For example, if we consider a group of simple pendulums hanging to a rigid support. Now, all these pendulums are in rest means having zero vibration. when we give the vibrations to only one pendulum automatically the linked pendulums are started to vibrate how it is possible.

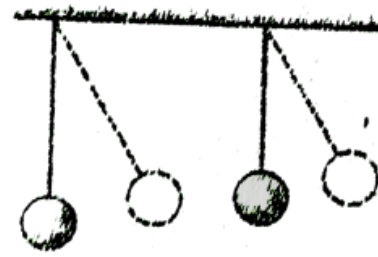

Fig 4: Simple pendulums with Frequency method

IV. WAVELET TRAVELLING

These wavelets are travelling from one place to another place from the human body. How it is possible? These wavelets have some amount of energy i.e., memory particle and frequency and also the weight of the particles are very very less and these can be travelling with the help of light(i.e. they are taking the photon energy from the environment), air by using electromagnetic Wave Phenomena. We can calculate the wave length by using the equation.

$$\lambda = c/f$$

λ - Wave length
 C - Light velocity
 F - Frequency

We got a doubt that how is light energy used? The all the amount of light energy is not utilized in the pattern. The emotion has some amount of frequency that much frequency of energy is only helpful to travel the particles from one point to another.

Why we feel the unknown location is well known to us? We feel unknown location is known to us why because, due to the particle had deposited at that place. The travelled particle will lose their energy when they are going to longer distances, why because means in the universe the energy is converted one form to another. In this the energy force is converted into velocity and after some time due to loss of light energy they will stopped at some certain point due to loss of energy they will deposit there and it is derived from us having some amount of memory in it. For example, if we consider a ice when it is present in freezer it will takes the suitable energy from the freezer to stable there. If we take out the ice from the freezer it will not have chance to take the suitable energy from the environment while present in sun rise. At that time the ice deposited at that place.

Fig 5: Ice in Freezer

Fig 6: Ice Present in Sunrise

Whenever we visit some place if our frequency is there i.e., if our travelled particles are deposited there and particle at that point frequency will be the same to our particle frequency(i.e., the emotion will be the same in both the instances) it will collect that deposited particle with help of absorption terminology. We will tell you this with a simple example if water is present on the metal then it will readily observe the oxygen present in the environment to form chemical reaction this type of chemical reactions are takes place in the human being in good as well as bad manner.

V. CONTROLLING OF EMOTIONS

We can control our emotions with the help of different techniques. In this the ancient to present most using technology is meditation. This meditation deals primarily controlling on Breath. As we discussed earlier that every emotion which will coming from the human body in the form of particles which are developed from the body by chemical reactions with air. This meditation technique is world approved and using technique to control our emotions.

Fig 7: Meditation

Another technique is giving vibrations to our brain. It mainly used for the people who are suffering from the mental disorders. In that situation doctors will provides certain amount of frequencies to the mental disorder persons to get back to original state. By using this technique, we can change the persons mental condition in any aspect.

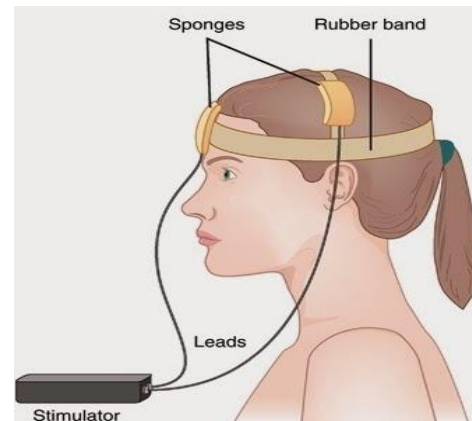

Fig 8: Giving Frequency to the brain

Another technique is hypnotism by using this technique one people can change another peoples mind frequency to their frequency. In that aspect the hypnotized people can only take the vibrations of the person who hypnotized him.

Fig 9: Hypnotizing used to change Frequency

Another technique is present near to us i.e., listening of music. This is also called as music therapy in this we can change our mind vibrations from one frequency i.e., one emotion to another emotion. This technique is widely using technique in present days.

Fig 10: Music Therapy to Change the Frequency

VI. CONCLUSION

By the above aspects we know that we can easily transfer our feelings from one point to another and these have memory particles and deposited there and also we can change the any person emotion through our emotions whenever the emotion frequency of signal is very high otherwise we are linked the persons signal because the high frequency signal occupies the other high frequency signal.

The color patterns that using in our terminology is taken from the rainbow which consists of all the emotions and it is derived from the white light i.e., the total energy inside our body is represented with the white light. All the other vibrations signal i.e., photon energies (colors light) is derived from that.

We can clearly see that we can change any person's vibrations using different techniques which are controlled by ourselves and controlled from the others.

ABOUT THE AUTHORS

Mr. Kishore Babu Kodali, M. Tech (Embedded Systems) from St. Mary's Group of Institutions Guntur and Working as a Sr. Research and Development Engineer in Electronics domain. He has done the Researches on Embedded systems, Sensor Designing's and PCB Manufacturing and Developments. Also acts as a trainer who Trains the Students to do their mini and major as their own. Given the Instructions to the Various College Students in their Project Developments. He has interest in knowing Electromagnetism, Electronic Circuit Designing's and Computers Technologies.

Mr. Bhagya Sankar Maddela, Studying M. Tech (Embedded Systems) in St. Mary's Group of Institutions Guntur and Working as a Software Engineer. He has done the Researches on Embedded systems, Sensor Designing's and PCB Manufacturing & Developments. He has interest in knowing computers technologies and electronics.

Ms. Saradha Rallabandi, Studied B.Tech in St. Mary's Group of Institutions. she has interests in electronics, computers and Electromagnetism.

Ms. Naga Lakshmi Aparajitha Maddi, Studied B. Tech (ECE) in St. Mary's Group of Institutions Guntur and working as Formatting Analyst at Apex Solutions Pvt Ltd, Guntur. She has interest in knowing computers technologies and electronics.

Mr. Sai Aravind Kavati, Studied B.Tech in St. Mary's Group of Institutions Guntur and Working as a Research and Development Engineer in Electronics domain. He has interest in knowing computers technologies and electronics.

Mrs. Sowjanya Kota, Studied B. Tech (ECE) in St. Mary's Group of Institutions Guntur and working as Formatting Analyst at Apex Solutions Pvt Ltd, Guntur. She has interest in knowing computers technologies, Electronics and Fashion Designing's.
